

HALEON

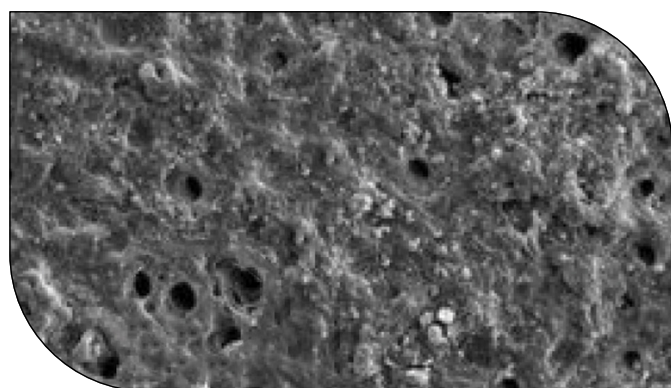

RAPID **ACTION**

Clinically proven sensitivity relief in 60 seconds*

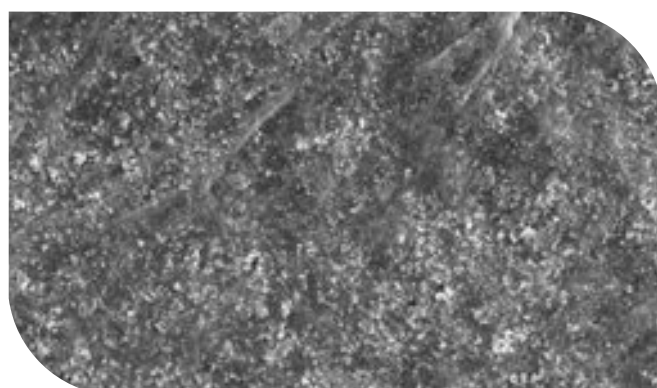

Sensodyne Rapid Action

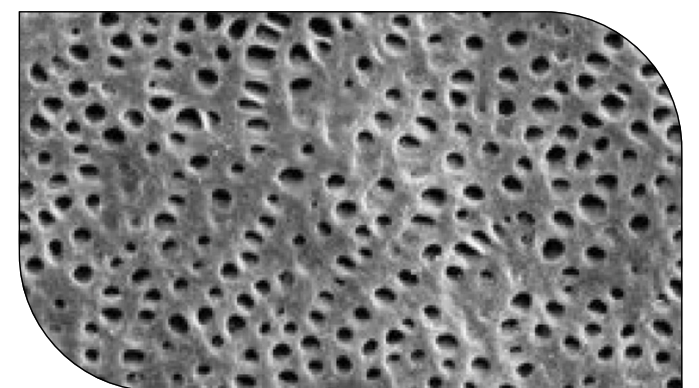

Dentine tubule occlusion is maintained after an acid challenge in vitro

Unoccluded dentine

After treatment and a
30-second acid challenge

After treatment and a
10-minute acid challenge

Images adapted from Parkinson & Willson 2011¹. In vitro study of dentinal tubule patency following an acid challenge (immersion in grapefruit juice, pH 3.3 for 30 seconds) applied after dabbing and massaging for 60 seconds with tubule occlusion based toothpastes.

* when used as directed; individual results may vary.
